## **DETAILED ACTION**

### ***Specification***

Applicants have failed to respond to the objection to the specification in the prior action. However, in order to advance prosecution of the case the objection is repeated in this action. Proper consideration/correction is required in reply to this objection.

The specification is objected . This objection is set forth in the prior Office action paper number 3.

### ***Claim Rejections - 35 U.S.C. § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-25 are rejected under 35 USC §103(a). This rejection is set forth in the prior Office action paper number .

Claims 1-3 and 7-8 are rejected under 35 U.S.C. 101.

***Response to Arguments***

3. Applicant's arguments filed on June 13, 2002 have been fully considered but they are not persuasive. .

Applicants argue that the claimed reference, Smith, does not teach the range of aldehyde content as claimed and that the process of oxidation to obtain the aldehyde in the molecule is totally different than that used in the present invention.

This is not convincing, because the examiner contention is that the aldehyde content of the fibers is an optimization variable and therefore obvious to one of ordinary skill in the art. Smith teaches that the aldehyde groups increase the strength of the fibers and that the presence of aldehyde groups is evidenced by an increase of wet strength in the paper formed from the modified fibers, column 7, lines 8-20. As to the method of making the fibers, this is irrelevant since it has not been claimed. Also it has been held that "[P]rocess limitations are significant only to the extent that they distinguish the claimed product over the prior art product." *In re Luck*, 177 U.S.P.Q. 523 (1973).

Applicants also argue unexpected results i.e., increase in the wet strength of the paper produced with the fibers.

This is also no convincing, because Smith explicitly teaches that the aldehyde content of the fibers increases the wet strength of the fibers, so one would expect an increase in the wet strength of the paper produced with the modified fibers.

Art Unit: 1731

Applicants also argue that the combination of references, Smith and Nooy, is improper because Nooy teaches the oxidation in an organic solvent and that one of ordinary skill in the art would not expect Applicants' oxidation, which does not requires the presence of an organic solvent, to produce aldehyde fibers.

This is not convincing because there is nothing in the claims that limits the formation of aldehyde in fibers in water or non-organic solvent. The Examiner recognizes that references cannot be arbitrarily combined and that there must be some reason why one skilled in the art would be motivated to make the proposed combination of primary and secondary references. *In re Nomiya*, 184 USPQ 607 (CCPA 1975). However, there is no requirement that a motivation to make the modification be expressly articulated. The test for combining references is what the combination of disclosures taken as a whole would suggest to one of ordinary skill in the art. *In re McLaughlin*, 170 USPQ 209 (CCPA 1971). **References are evaluated by what they suggest to one versed in the art, rather than by their specific disclosures.** *In re Bozek*, 163 USPQ 545 (CCPA) 1969.

#### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 1731

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
